

ST-WEB

Telemetry in Web Service

Our Web Service telemetry system, enables individual users and condominium administrators to check at any time the actual consumption of the single unit or the managed condominium, always guaranteeing maximum privacy.

The integration of counting systems with the telemetry web system we realised, guarantees several advantages:

- Real time consumption display.
- The tenant has the ability to display the consumption patterns, allowing him/her to intervene in the management of any waste, resulting in great savings.
- Detection of any systems malfunction.
- Saving on the cost of readings with the advantage of obtaining much more information.
- Automatic calculation of the consumption allocation (for the administrator).
- Remote control and remote management functions
- Sending of alarm signals.

WEB-BASE TELEMETERING SERVICE

The proposed service has the following features:

- Consumption data reception from Sitec concentrators (STCM and STRM series).
- Flexible system applicable in systems using meters and/or heat cost allocators.
- Ability to display the consumption history
- The tenant can access from any internet connection:
 - User login and password for each individual user.
 - Consumption data updated periodically (daily, weekly or monthly).
 - Data can be displayed in tabular or graphical form.
 - Ability to print the consumption data.
- Administrator access from any internet access:
 - Administrator login and password.
 - Ability to display the consumption of the individual tenants.
 - Consumer data update frequency can be set by the administrator.
 - Consumption data can be displayed in tabular or graphical form for the whole condominium and for the individual tenant.
 - Ability to print the consumption data.
 - Ability to configure the condominium (general information, counting devices/users pairing, etc).
 - Ability to report malfunctions directly via Web.
 - Ability to carry out up to five readings outside the frequency set directly from the Web.

WEB-PLUS TELEMETERING SERVICE

The WEB-PLUS Service is an extension of the WEB-BASE service that adds functionality especially useful to the administrator:

- Automatic calculation of the allocation of condominium costs.
- Invoice printing for each tenant and/or sending by E-Mail.
- Ability to alert the administrator by E-Mail of consumption over a preset threshold.
- Extension (up to ten) of readings outside the set frequency.
